

SIX GOOD REASONS WHY AIRplus® AIR CUSHIONS ARE THE RIGHT CHOICE

1

The **cost of the energy and resources** required for returning and reproducing a damaged product is much **higher than that of using air cushions** in the first place.

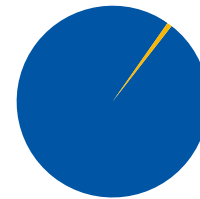

Air cushions are tear-resistant, durable, and **reusable**.

2

3

Air cushion components:
99% air
1% film

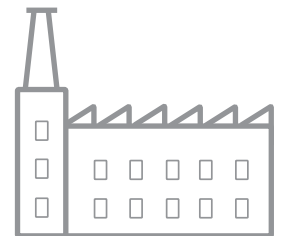

Storopack AIRplus® requires **less space** than conventional air bubble film, as the film is inflated on demand. That **not only saves storage space**, but is also **better for the environment**, as less space is used during shipment.

4

5

It takes **less energy and water** to manufacture film than paper cushions, and **no unpleasant odors, toxic vapors, or waste water** are created.

Simple disposal through household recycling. It also requires **less energy to recycle** film than paper. The film is **100% recyclable**.
